ABSTRACT OF THE DISCLOSURE

When "store" of intermediate data is designated
in a print process, a spooler stores intermediate data
and an output job setup file in a spool file. When the
5   stored job is selected, a previewer displays a list of
jobs, and displays a print preview image. In this case,
if "Same side on" is designated, pages of successive
jobs are laid out without any gaps. If "new sheet" is
designated, pages of the trailing job are laid out on a
10   new sheet. If "Other side on" is designated, pages of
the trailing job are laid out on a new surface.
